EDUCATION

SRM Institute of Science and Technology **2023 – 2027**
B.Tech - Computer Science and Engineering - ***CGPA - 9.66*** *Chennai, TN*

EXPERIENCE

Jio Infocomm Limited **May 2026 – Jul 2026**
Software Engineering Intern *Remote*

- Engineered a **real-time video analytics platform** using Python, YOLOv8, OpenCV, and React, processing **20+ concurrent CCTV streams** with low-latency inference for automated occupancy monitoring.
- Designed FastAPI REST services and a persistent data layer exposing live seat states and historical utilization for **zone-level and peak-hour planning**.

Samsung Prism India **Mar 2025 – Jan 2026**
Research & Development Intern *Remote*

- Designed a **RAG-powered SQL optimization engine** combining schema-aware retrieval and **LLM-guided** query rewriting, improving execution time across 500+ benchmark queries.
- Engineered an **automated SQL benchmarking pipeline** executing generated queries against baselines and using performance feedback to improve query efficiency.

PROJECTS

Signal – Smart Market Watchlist

- Built an **intent-aware watchlist** with React, TypeScript, Express, and PostgreSQL, letting users track stocks against personalized buy, sell, earnings, and 52-week conditions.
- Developed **modular signal evaluators** and a meaningful-change engine that combines market movement with each user's last-seen state to surface relevant updates.
- Integrated **Redis quote caching**, Socket.IO notifications, and a REST sync endpoint to deliver live signals and recover missed updates after reconnects.

Codenza – Scalable Online Judge Platform

- Built a **full-stack online judge** using React, Node.js, Express, and MongoDB with authenticated code submissions and execution tracking.
- Engineered an **asynchronous code evaluation pipeline** using **Redis/BullMQ** and isolated Docker containers for secure, non-blocking execution.
- Deployed the backend on **AWS EC2**, integrating AI-powered coding assistance while separating hidden test cases from user-facing workflows.

DevHive– AI Powered Developer Matchmaking Platform

- Engineered a developer matchmaking platform using Django, React, TypeScript, and Supabase, integrating **GitHub OAuth, REST APIs, and real-time messaging.**
- Designed an **AI-powered compatibility and ranking engine** combining **LLM-based resume parsing**, GitHub profiling, and skill similarity scoring to deliver personalized developer recommendations.

TECHNICAL SKILLS

Languages: C++, Python, Java, TypeScript, JavaScript, SQL
Frameworks & APIs: React, Node.js, Express.js, Spring Boot, Django, FastAPI, REST APIs
Databases & Caching: PostgreSQL, MongoDB, MySQL, Redis, Supabase
Cloud & Tools: AWS (EC2), Docker, Git, Linux, GitHub Actions, BullMQ, Socket.IO
Core CS: DSA, OOP, Operating Systems, DBMS, Computer Networks, System Design

ACHIEVEMENTS

- Secured **National Rank 14** in the **ICPC Taiwan 2024 Coding Contest**.
- **National Semifinalist** – Flipkart GRiD 8.0; **National Finalist** – Code by Groww 2026.
- Selected among the **Top 50 of 3000+ applicants** for Samsung PRISM India; received an **Excellence Certificate** as a **Top 5 team**.
- Co-authored *"ForestEye: RGB-Based Deforestation Detection and CO_2 Stock Assessment Using U-Net with CBAM,"* published at **IEEE ICSC 2026**.
